

Rubber Fab

a Garlock Hygienic Technologies company

Torque Tee

Rubber Fab's Torque Tee and universal torque socket are designed to aid in clamp installation and removal. Available with a family of components, the Torque Tee handle creates effective tightening leverage and aids in reaching tight spaces, including over head and behind tanks. Torque Tee is available in 30 in/lbs and 50 in/lbs as a standard. Socket and accessories are sold separately.

Torque Tee Use

We suggest that you take a moment to acquaint yourself with the features built into your Torque Tee.

Torque Release: The amount of torque which releases the turning capability of this wrench is set on the ends of the handle.

Ratchet Action: Within this wrench there are tiny ratchet teeth. They allow you to get a new "bite" without removing the tool. This helps you work faster.

Reversing Collar: By engaging the collar, you can loosen difficult clamps with the same hand. The safety design prevents over-tightening.

Using Your Torque Tee

When you have to loosen a bolt, align the flanges of the reversing collar with the handle. Then grasp the collar with two fingers, pulling the collar towards the handle. Rotate the collar slightly counterclockwise to engage the pin in the slots. The collar then locks the shaft to the handle, so you can loosen the clamp, the collar will automatically disengage.
